

Essay Mobile

This project is designed to help you improve your writing structure and organization. You will need to visualize your essay structure and construct a mobile where each “level” of the mobile represents a different part of the essay. It’s like a flowchart:

*cd/a = Concrete detail and analysis that explains how the detail supports the topic sentence and/or the thesis. When writing a DBQ response include ANALYSIS of documents and incorporate POINT of VIEW.

Your mobile should have a theme. Each level should be represented visually by a different part of the overall theme. The idea that the thesis drives the entire project by representing the most significant part of the theme is also important from a conceptual standpoint.

Essay Question:

Due Date: _____

Hints: Use construction paper or cardstock. Remember that a Mobile is 3-Dimensional. Make sure that you use both sides of each level. Use yarn or some other thick cord to connect your levels. **Do Not Use String or Thread** – it will tangle and break. Make a rough draft before you start putting together your final mobile. Be sure to leave enough space to write. Have fun!
